Electromagnetic shielding

Shielding of an installation for EEG/ECG use to protect the technical equipment from disturbances from outside or other technical installation.

The shielding is based on the EMC copper wallcovering, a flexible fibre fleece with electromagnetic shielding function, flame retardant, according to DIN 4102 B1, class A according to ASTM E 84-97 a. Breathable according to DIN 53-122.

EMC copper wallcovering installed according to the installation guideline incl. material and adhesive at:

- a) walls
- b) ceiling
- c) floor

Shielding of windows by:

- a) shielding roller blind, various types available
- b) shielding curtains / sheer curtains, made according to measure
- c) shielding foils/film to be stucked on the glass

Earthing connection for the wallcovering, valid national standards and regulations have be observed

Installation guideline available at
